

26TH DIGITAL BLUE ECONOMY SUMMIT

ParaSail

A smart guide for safer fishing and healthier oceans

Predictive Advisory and Retrieval-Augmented System Advancing Informed Livelihoods

Is it safe to sail?

Are the fish there?

Is it allowed?

One simple answer to all three questions - before you leave the harbour.

Anantha Krishnan AS · Naipunnya School of Management, Cherthala, India · September 2026

The sea is changing - fast

1 in 3

fish populations are now overfished

FAO, 2023

3× more

plastic flowing into the ocean by 2040

UNEP, 2023

**500
million**

people depend on small-scale fishing

FAO, 2023

The ocean needs a break - and fishers need better information. ParaSail helps with both.

The fish are moving away

The sea is warming - and fish follow the warmth to new waters.

1

Yesterday's spots are empty

Fish that gathered off this coast for generations now gather somewhere else.

2

The old calendars no longer work

The trusted months for each fish drift out of step with the sea.

3

The search costs real money

Boats burn fuel and days hunting fish that simply are not there.

The ocean needs a break

Spawning grounds get disturbed

Fishing while fish are breeding leaves fewer fish for everyone next year.

Protected zones are fished by mistake

At sea, boundaries are invisible. Honest mistakes still harm the ocean - and bring fines.

The sea is already strained

Plastic, pollution and overfishing leave less room for error.

Rules exist to protect all of this - but only if they are easy to follow.

Going to sea is dangerous

“A small boat, an open sea - and a weather forecast meant for everyone, and no one.”

1

Warnings are too general

City-wide forecasts say nothing about the wind and waves off your own fishing ground.

2

The sea turns fast

Conditions can change completely between dawn and noon.

3

Families wait ashore

Every trip carries a worry that better information could ease.

Information is everywhere - and nowhere

THE WEATHER APP

Wind and waves - but nothing about fish or rules.

THE RULEBOOK

Paper and offices - hard to read, harder to check at sea.

THE ELDERS' KNOWLEDGE

Rich and true - but living only in memory.

Nothing connects them.

So the fisher must be their own weather expert, lawyer and fish scientist - before sunrise.

What is at stake

Livelihoods

Fishing feeds and employs half a billion people worldwide.

Food

Small fish from small boats put dinner on millions of tables.

Culture

Coastal communities are built around the sea and its seasons.

The ocean

A sea under this much pressure recovers slowly - if at all.

Fishers need better information - and the ocean needs fishers to have it. That is the idea behind ParaSail.

Meet ParaSail

Like a weather app - but for fishing.

You tell it where you fish and what you catch. Before you sail, it gives you one simple answer - safe or not, fish or not, allowed or not - together with the reasons.

Answers in plain words

No numbers to decode - GO, WAIT or STOP.

Ask it anything

A built-in AI helper answers your questions in your own words and language.

Free, open data

Built on public weather and satellite information - and its own local AI, not a paid cloud service.

The answer is a traffic light

GO

Good conditions. Safe to sail, fish are likely, everything is allowed.

GO CAREFULLY

Fishing is possible - but keep an eye on the changing weather.

WAIT OR MOVE

Rough seas, or young fish nearby. Better to wait or try another spot.

STOP

Not safe, or not allowed. Stay ashore today.

Protected area or closed season? The answer is always STOP - no exceptions, whatever the weather.

What you actually see

TOMORROW, 5 AM — OFF KOCHI

GO

- Waves 0.8 m — safe for small boats
- Sardines likely in this area
- Zone open — no restrictions

JUNE 15 — ANYWHERE ON THE COAST

STOP

- Sardine season is closed
- So the fish can spawn and multiply
- Fishing opens again August 1

Simple on purpose - the details are one tap away for anyone who wants them.

Ask it anything - in your own words

ASK PARASAIL

"Can I take my small boat out tomorrow morning?"

GO CAREFULLY - waves near 1 m in the morning, wind rising after noon. Best back before two.

sources: marine forecast · rulebook

"And in June, for sardine?"

STOP - the sardine season is closed so the fish can spawn.

1

Answers in plain words

Ask like you would ask a neighbour - no forms, no jargon, and it answers in your language.

2

Shows its sources

Every answer points to the forecast, rule or local knowledge it used - check it yourself.

3

Free for everyone, always

The AI runs on our own computer, not a paid cloud service - heavy use costs nothing extra.

*The AI explains the advice - it never overrules it. Closed season?
The answer is still STOP.*

It shows its homework

THE ADVICE

GO

Tomorrow, 5 AM, off Kochi
Safe to sail · sardines likely · zone open

THE HOMEWORK

- Waves forecast: 0.8 m - safe for small boats
- Rulebook: this zone is open all year
- Sardines gather here in September

Every recommendation shows the reasons behind it - the forecasts, the rules, even local fishing knowledge. You can always check for yourself.

Built to grow: new rules, new data, even whole new coasts are added as documents - the library simply grows.

Your coast. Your fish. Your rules.

ParaSail is not a one-size-fits-all app. It is set up for each coast it serves:

1

Quick to set up

A new coast, with its own fish and rules, can be ready in days - not months.

2

Runs on ordinary computers

No supercomputer needed - a mid-range laptop is enough to teach it, and it switches to bigger or smaller AI models to match the machine.

3

Now a phone app

Install it from the website: it opens on your phone even with weak signal, and answers in your language - fish names included.

4

Keeps local knowledge

Fishing calendars and season wisdom from the community are saved in a digital library the system consults.

It worked - here is what we found

Live data kept flowing

Even when the internet went down, the advice continued - clearly marked as slightly older information.

Closed seasons were always respected

Every single test during a closed season came back STOP. No exceptions, ever.

Advice changed sensibly

When the weather turned or the fish moved, the traffic light changed exactly as it should.

Every answer explained itself

The reasons shown next to each advice were checked - and they were the right ones.

Everyone on the coast

Fishers

Save fuel, stay safe, and avoid fines from honest mistakes.

The ocean

Protected zones and spawning seasons are left in peace - automatically.

Communities

Generations of fishing knowledge are saved in a lasting digital library.

Authorities

Clear, fair decisions backed by evidence everyone can see.

One system, four winners - that is what a sustainable blue economy looks like.

Fish smarter. Stay safe. Keep the ocean giving.

ParaSail answers three questions every fisher already asks - is it safe, are the fish there, is it allowed - and shows its reasons every single time.

The phone app is here today - installed from the website, it works offline and speaks your language. Next: a season-long trial with fishing communities, and voice guidance.
